Your audio install was never so easy thanks to this new technology!

All the features to manage a system in 1 tool: the Dante® controller

nexgentec™ increases simplicity again for its partners by upgrading all their interfaces from AES67™ to Dante®. All nexgentec™ products will soon be even easier and faster to configure, install and manage thanks to this upgrade in technology. It allows its integrators to work with only one management tool for all audio network devices – the Dante® controller.

nexgentec™ DSP's and amplifiers already have a Dante Brooklyn™ card, so for these devices the Dante® controller could already be used. The other products, up until now, still used AES67 as an audio interface and were managed partially with the AES67™ web UI.

The recently launched new NGTC-CRBIBOB, will be the first nexgentec product that will be available in May 2021 with the new Dante Broadway™ chip. The NGTC-MCP4k will be next, expected in July and the NGTC-TVI and NGTC-BTI will follow, probably later this year.
