

November 12th – just four days before METSTRADE, the world’s largest international B2B trade exhibition for the marine leisure industry, Genesis Technologies Marine is proud to announce the official release of four new and greatly anticipated nexgentec (NGTC) products featuring Dante™.

This includes 2 new bridgeable 140-Watt amplifiers of only half a RU wide and 1 RU high - the 2 channel NGTC-2140PWR and the 4 channel NGTC-4140PWR. They have a 2 port lan interface with a managed switch already integrated, so the integrator can now finally choose whether they prefer to use 1 or 2 network cables, while still keeping separate VLANs for audio and control! This not only provides maximum flexibility for new build projects, but it is especially useful for the many refit projects where the number of cables available are limited. Here it can prevent the need for running new cabling, with all the accompanying time and expenses involved. It also reduces the need in refits to use up cables that were purposely placed for redundancy.

And there is now the new, bridgeable version of the NGTC-32140PWR, as well as its smaller sibling, the NGTC-16140PWR. This means, if needed, double the power is available for a single speaker or subwoofer. The non-bridgeable version of this amplifier is already the nr. 1 favorite on the marketplace, since it’s (1RU wide and 2RU high) size is a revolutionary space and energy saver compared to any other amplifiers that are currently available.

nexgentec is known for all its products, and in particular its amplifiers, being specifically designed with the functionality and quality requested by the high-end marine market. This differentiates nexgentec from all other network audio products manufacturers. If you would like to find out more about the unique nexgentec feature set, and what sets it apart, this year’s show, you have the opportunity to book a 15 minute, hands-on workshop about the nexgentec functionality and its configuration.

Last but not least there is a revolutionary new break in box - the NGTC-BIB8-HDA. Previously, sources such as Sonos™, Chromecast™, Apple TV™ audio, etc could only be connected to the Dante® network with analogue break in boxes. Thanks to this cool new interface, fully digital conversion becomes possible, which ensures perfect sound quality without any loss or distortion. It also solves any previous difficulties with HDMI™ conversion.

Genesis Technologies Marine will be exhibiting at METSTRADE in Amsterdam from the 16th to the 18th of November, where they will have the whole nexgentec line on display, including a fully working audio system based on the unique Software Defined Matrix (NGTC-SDM), Bluetooth® audio, with a NGTC-BTI, surround sound processing with the NGTC-MCP4k, a NGTC-DSP, NGTC-CRBIBOB, NGTC-TVI, a NGTC-32140PWR and the best features & functions available on the market today.

They kindly invite you to visit their stand nr 07.545 at the SuperYacht Pavilion (SYP) to experience their innovative and complete nexgentec audio over IP solution, that can be the solid ‘backbone’ to the most refined and robust audio-visual entertainment systems on any superyacht.
